Economic Review 1984

Number Thirty-Eight

Saskatchewan

Foreword

Our Province appeared to be well on the way to again posting strong economic growth in 1984 until the drought hit. We began the year with a record one million residents and overall good prospects.

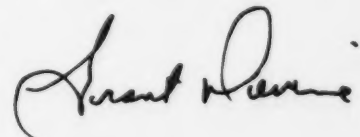

1984 has been a difficult year for the farm community. Drought conditions in southern Saskatchewan caused crop production to decline to the lowest levels in many years. The northeast had record amounts of precipitation in the spring, flooding, and late seeding while southern areas had a hot, dry summer. In the livestock industry, the drought damaged feed supplies.

Yet farmers and the government worked together to overcome the difficulties. Yields were better than first anticipated. Excellent weather enabled many to harvest the highest quality crop ever. My government negotiated, with our federal counterparts, new programs to aid north-east flood victims and livestock producers affected by drought.

Despite the drought, the Saskatchewan economy was still able to create many new jobs. As a result, the economy now employs more people than ever in our history. Saskatchewan continues to have the lowest unemployment rate in Canada. Nevertheless, employment growth is my government's first priority. The province must create enough new and satisfying jobs to employ our growing work force. The key to meeting this challenge is industrial competitiveness — developing and producing goods and services with quality and prices that make them attractive to consumers here and abroad.

The oil industry is booming due to changes in government policies. The two planned heavy oil upgraders to be built in Saskatchewan will sustain economic activity. The production of both potash and uranium rose strongly in the past year. Barring unpredictable external forces, the prospects for growth and diversification are excellent.

There are, and will be, problems for economic growth, but in this year of drought we have shown our capacity to face up to and overcome difficulties and sustain our province as an international centre for growth and opportunity.

Grant Devine
Premier

Output, Employment and Prices

The Saskatchewan economy in 1984 posted strong growth in output until the drought hit. The production and sales of oil, potash and uranium were up sharply and farmers had seeded about 3% more acreage than in 1983. The crop started off well except in the northeast where heavy rains delayed seeding. By the end of June, however, the drought was well underway. Some areas of the province went without rain for more than a month during the summer.

Saskatchewan enjoyed above average crop production in the past three years. The drought ended that record this year. The harvest of the six major grains and oilseeds in 1984 is estimated at 16.1 million tonnes, down almost 20% from 20.0 million tonnes in 1983 about 13% below the five year average of 18.4 million tonnes. Due to the drier than normal harvest period, 94% of the spring wheat is expected to grade in the top two grades.

New capital investment was lower during 1984 as housing demand contracted and work on some major resource projects slowed. Work finished on the Key Lake uranium mine and mill. A number of major investment projects continued during 1984: the Phase II expansion at the Lanigan potash mine, the expansions at the Collins Bay and Cluff Lake uranium mines, the construction of the Nipawin hydro-generating station, and the rural gasification program.

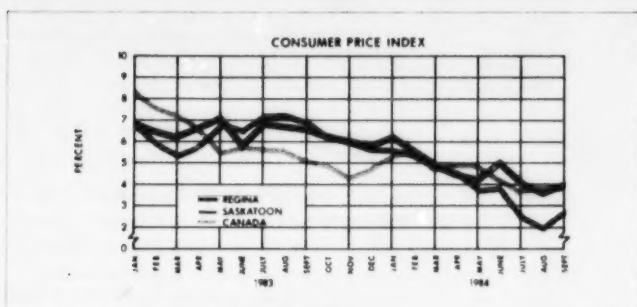

The level of employment was 3,000 higher in 1984 compared with 1983. The Saskatchewan jobless rate that averaged 8 percent in 1984 continued to be the lowest in Canada. The Canadian unemployment rate, in contrast, averaged 11.3% for the year.

Employment has risen in the key goods-producing sectors: new jobs have been created in agriculture, mining and manufacturing. Construction, public administration and the non-trade services all experienced declines in employment due to lower housing activity in the first case and a general retrenchment in the latter. Overall employment was up 3,000 in 1984.

Inflation as measured by the Consumer Price Index was sharply lower in 1984. Following an average increase in the C.P.I. of 6.4% in Regina and Saskatoon in 1983, the overall price increase in the two cities was about 4% for the year. At the national

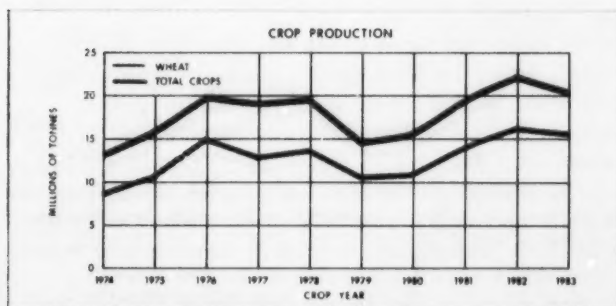

level, the rate of inflation is expected to average about 4.5% in 1984 compared with 5.8% in 1983.

Agriculture

The 1984 crop year brought with it mixed success. Drought conditions in southern Saskatchewan caused crop production to decline to the lowest levels in many years. However, yields were better than anticipated. Excellent weather enabled many to harvest the highest quality crop ever. Northern areas were not so fortunate. The northeast had record precipitation in the spring, flooding, late seeding, a hot, dry summer and for some areas, a long, wet harvest which was not completed before the snow came.

Production of the six major grains and oilseeds in 1984 is estimated at 16.1 million tonnes, down almost 20% from the 20 million tonne harvest in 1983 and about 13% below the five year average of 18.4 million tonnes. Due to the drier than normal harvest period, 94% of the spring wheat is expected to grade in the top two grades. This compares to 70% for the 10-year average. Many producers have reported extremely high protein content. Deliveries of all grains to country elevators were 17.5 million tonnes in the 1983/84 crop year, compared to the record of 19.1 million tonnes in 1982/83.

Canadian exports of prairie grains and oilseeds reached a record high of 29.4 million tonnes, surpassing the previous record export total of 28.3 million tonnes attained in 1982/83. Exports this crop year (1984/85) will most certainly decline due to the smaller crop.

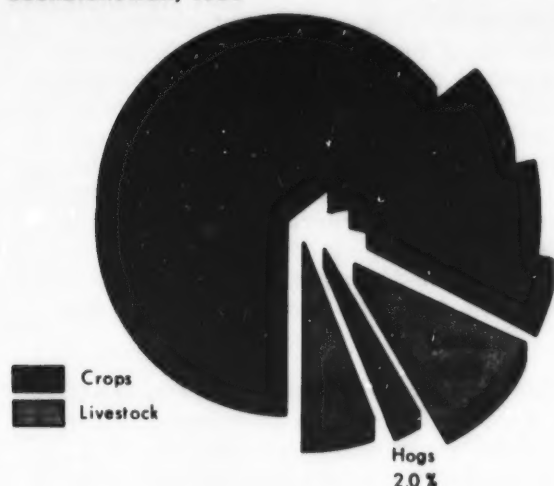

The price of wheat remained soft throughout most of the year. Higher production of wheat, especially in the EEC and China, are expected to cause global supplies of wheat in 1984/85 to rise a further 2.5%, contributing to the existing worldwide excess supply. The C.W.B. asking price at Thunder Bay for No. 1 C.W. 13.5% protein wheat on October 25 was \$211.26 (Cdn)/tonne, compared with \$210.25 (Cdn)/tonne in 1983.

Producer marketings of hogs were about 24% higher in the first ten months of 1984 compared with the same period a year ago. Prices for index 100 hogs rose moderately over the period. Net provincial stabilization payments for hogs were \$6.3 million for the first three quarters of 1984.

As of July 1, 1984, the cattle population on Saskatchewan farms decreased 2% to 2.2 million head. Slaughter marketings for January/August 1984 were up 7% and feeder sales were up 2%. The average price for AI, 2 railgrade steers was more than 7% higher in January/August 1984 than in 1983.

The drought damaged feed supplies in 1984. Many southern areas did not produce enough hay, straw or greenfeed. Although northern and central areas reported adequate supplies. The most serious feed shortages were in the southwest corner of the province. The governments of Saskatchewan and Canada have jointly funded a \$26 million program to help the province's livestock farmers maintain their breeding herds through the winter. Approximately 20,000 livestock farmers with about 650,000 animals in the RMs will receive financial aid to help cover the added cost of buying and transporting winter feed for their breeding herds. In a severe drought area, payments will be \$48 per head for beef and dairy cows, and \$10 per head for sheep and goats. In a moderate drought area, farmers will receive \$30 per cow and \$6 for sheep and goats. A farmer must keep 75 per cent of his herd until April 1, 1985.

Distribution of Farm Cash Receipts by Commodity, Saskatchewan, 1983

Statistics Canada forecasts that total farm cash receipts for the year will reach \$4.2 billion, about 7% higher than in 1983. Farm income rose modestly in 1984 due to strengthening in some grain prices, an expected increase in livestock revenues, a \$126 million payout from the Western Grain Stabilization Fund and a \$220 million payment from Crop Insurance. The drought is estimated to have cost Saskatchewan farmers about \$1 billion in lost revenues and its full impact will extend into 1985 and beyond. Some of this loss will be offset by an expected payout from the WGSF Fund and greater liquidation of grain cash deferrals. Operation and depreciation charges are expected to rise about 4% to \$3.4 billion. As a result, net realized farm income is expected to rise to just over \$870 million from \$757 million in 1983.

Mining

Mineral and oil production and sales continued to rebound during 1984. In response to the 1983 federal-provincial energy amendment and the provincial Energy Recovery Program, oil production is at virtual full capacity. Potash sales rebounded with the increased seeding in the U.S. and uranium production and sales tripled when Key Lake began commercial production.

Potash production rose almost 29% in 1984 over 1983. U.S. farmers increased their acres seeded with the end of the Payment-in-Kind program, new financing arrangements with Brazil and the renewal of a major contract with Japan, contributed to a 7.8% increase in 1984. Year-end inventories totaled 1.6 million tonnes. Sales revenues rebounded about 23% in 1984 as the average price of potash rose about

17% over 1983. Major mine expansions by Kalium at Belle Plaine and PCS at Lanigan will add well over one million tonnes of provincial production capacity.

Uranium production more than tripled in January/November this year over 1983 due to the Key Lake mine coming onstream. The mine began operation in October 1983 and reached commercial production (60% of designed capacity) in February 1984. Prices, in contrast, declined about 19% between 1983 and 1984. The development of Collins Bay 'B' Zone to replace the depleting orebody at Rabbit Lake and the Cluff Lake Phase II expansion will add 3.4 million kg of capacity when fully operational by 1986.

Coal production was about 29% higher during the first 11 months of 1984. With prices up about 7%, sales receipts jumped about 38% between the two years.

The Saskatchewan oil and gas industry continued to break records in 1984. The amendments to energy pricing and taxation in combination with the Energy Recovery Program initiated by the government of Saskatchewan in July 1982, and the extension of one year royalty/tax holiday for development drilling to the end of 1985 spurred drilling activity to new peaks. By December 31, 2,970 wells had been drilled, shattering the 1983 record of 1,843 wells. The number of gas wells drilled increased to 444 in 1984 from only 159 in 1983. Sales of Crown petroleum and natural gas rights in 1984 realized record bonus revenues of \$123.7 million compared with \$108.0 million for 1983. The four sales in 1982 brought in only \$34 million. The land sale results and drilling and licencing statistics indicate that the current high level of activity in the province's oil fields will be sustained. This, in turn, has augmented the resurgence of the province's oil service and supply business. Oil production was about 13% higher in 1984 than in 1983.

Manufacturing

The value of manufacturing shipments in the first nine months of 1984 was more than 11% higher than in the same period in 1983. Although the Saskatchewan increase was less than for manufacturing in Canada as a whole, it was likely a more sustainable gain than the auto-led increase in the rest of Canada. The latest survey of capital spending intentions showed that manufacturers planned to invest about 8% more in Saskatchewan in 1984 than in 1983.

The second heavy oil upgrader for Saskatchewan was announced in June 1984. The 46,000 barrel per day upgrader has been proposed for construction near Lloydminster, Saskatchewan, by Husky Oil Operation Ltd. A 50,000 bpd upgrader in conjunction with the Consumer Co-operative Refinery in Regina was announced in 1983.

The Husky upgrader will draw equal volumes of heavy oil and bitumen from the Lloydminster area and the Cold Lake area. The development of adequate sources of feedstocks and construction of the upgrader will involve capital expenditure of \$900 million and \$1.4 billion respectively, for a total of \$2.3 billion over the next five years. Including operating costs, total expenditures over the next five years are estimated to be \$3.2 billion. During construction, the project will generate more than 18,000 person-years of employment over the next five years. When completed, the upgrader will produce 46,000 barrels of synthetic crude oil a day and employ 300 in the plant and many more in the oil fields and servicing industries.

The upgrader will provide an assured market for Saskatchewan's crude stream, reaffirm the viability of future exploration and development in the province and encourage the development of enhanced oil recovery which is crucial to the long term stability of Saskatchewan's oil industry. Heavy oil exploration and development is also of national strategic importance as it is the lowest cost unconventional oil supply source in Canada.

Prospects for the 1980s

Saskatchewan will face a number of challenges during the rest of the decade. Employment growth has emerged as the key problem of the decade. Even though the Saskatchewan unemployment rate is the lowest in Canada, the province will be challenged to create enough new and satisfying jobs to employ our growing work force and to increase the standard of living for all. The key to meeting this challenge is industrial competitiveness — developing and producing goods and services with quality and prices that make them attractive to consumers here and abroad.

The establishment of the Employment Development Agency is one indicator of the government's faith in the Saskatchewan economy to create jobs. This agency will assist in creating employment development strategies and will ensure that employment development initiatives are consistent with the overall economic development policy of the province.

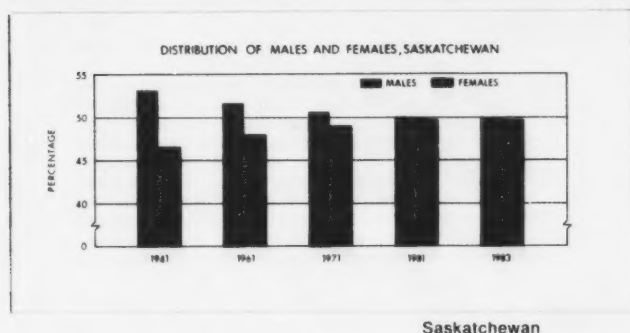

Finally, Saskatchewan will be challenged to strengthen and diversify its economy. The continuing expansion of Saskatchewan's economic base through resource production, processing and associated manufacturing activities will further enhance the province's position as a leader in Canadian growth and competitiveness.

**Saskatchewan
Economic
Accounts
1973 to 1983**

Saskatchewan Economic Accounts

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the Accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The Accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has available, upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.
